

To create an Amplify Assistant and use it within the Amplify API, follow these steps to create an assistant and collect the Assistant ID:

1. Login to Amplify at: www.vanderbilt.ai
2. Navigate to the “Assistants” tab in the top left corner and click the “Assistant” button to open the menu to create an assistant.

3. Give the assistant a name, provide your prompt in the “Instructions” field, and attach your data sources where it says, “Upload Data Sources”. Now click “Save”.

- Once your assistant is created, open the “Assistants” folder (within the assistants tab that should already be open), and hover your mouse over your newly created assistant. Click the edit assistant button.

The image consists of two vertically stacked screenshots of a web-based AI application interface, likely Amplify AI, with a dark theme.

Screenshot 1 (Top): This screenshot shows the left sidebar under the "Assistants" tab. A red arrow points from the text "Once your assistant is created, open the “Assistants” folder (within the assistants tab that should already be open), and hover your mouse over your newly created assistant. Click the edit assistant button." to the "Assistants" folder icon. The "Assistants" folder is circled in red. The main workspace displays a "Start a new conversation." prompt and a model selection panel for "GPT-4o-mini (Default)".

Screenshot 2 (Bottom): This screenshot shows the same interface after an assistant has been created. The "Assistants" folder now contains several items, including "Helpful Assistant", "HRHelper", "LegalEagle", "Meow", and "My Paper Assistant". The "My Paper Assistant" item is circled in red, and a red arrow points from it to the "Edit Template" button (represented by a pencil icon) located next to the assistant's name. The main workspace remains the same as in the first screenshot.

5. Scroll down to the bottom of the popup and click “Advanced”. Now, copy the Assistant ID and use it within a script to chat with the assistant through the Amplify API.
