

To create an Amplify assistant and publish it to a URL, follow these steps:

1. Create an assistant by navigating to the “Assistant” tab in the top of the left sidebar and selecting “Assistant”. Alternatively, edit an existing assistant by navigating to the “Assistant” tab in the top of the left sidebar, clicking on the “Assistants” folder dropdown, then hovering your mouse over one of your assistants and clicking the “Edit” button.

2. Scroll down to the bottom of the popup and click “Advanced”. Scroll down to the “Publish Assistant Path” section and type in your desired URL path. Please note that paths taken by other users and paths containing inappropriate terms are not allowed.

The image consists of two vertically stacked screenshots of a web-based application interface, likely a browser extension or a dedicated AI management tool. Both screenshots show a sidebar on the left with various AI assistant profiles and a main 'Assistants' configuration window on the right.

**Screenshot 1 (Top): Advanced Configuration Step**

- The main window title is 'Assistants'.
- The 'Instructions' section contains the text: "Always respond very enthusiastically. Make it very over the top. WAY too excited."
- The 'Disclaimer to Append to Responses' section contains the placeholder text: "Assistant disclaimer message."
- The 'Upload Data Sources' section includes a button labeled 'Attach Drive Data Sources'.
- A red circle highlights the 'Advanced' button, which is located at the bottom of the sidebar under the 'Assistants' heading.
- At the bottom right of the window are 'Cancel' and 'Save' buttons.

**Screenshot 2 (Bottom): Publish Assistant Path Configuration**

- The main window title is 'Assistants'.
- The sidebar shows the 'Advanced' profile is selected.
- The 'Assistant ID' is listed as `astp/91b7b0cc-4f08-42f7-92f6-f9141dbf8ddb`.
- The 'Assistant Type' is set to 'Standard'.
- The 'Publish Assistant Path' section is highlighted with a red border. It contains the path `enthused`. A note below states: "Path requirements: 3-100 characters, letters, numbers, hyphens, underscores, and forward slashes. No leading/trailing slashes or consecutive slashes. No reserved or inappropriate terms." To the right of the path input field is a checked checkbox for "Publish to all users" and a "+ Add Assistant Icon" button.
- The 'Data Source Options' section includes options for "Include Message IDs in Messages", "Insert Line Numbers in User Messages", and "Insert Line Numbers in Assistant Messages".
- The 'Feature Options' section includes a checked checkbox for "Allow Assistant to Create Artifacts".
- The 'Tags' section allows entering comma-separated tag names.
- The 'Conversation Tags' section is partially visible.
- At the bottom right are 'Cancel' and 'Save' buttons.

3. Clicking “Save” will make this assistant available to all Amplify users at the path you defined. Alternatively, you can restrict what users have access by unchecking “Publish to all users”, clicking “Manage user access to published assistant”, and entering the email addresses of users you would like to access the assistant. Then click “Save”.

The screenshots illustrate the configuration of an Amplify Assistant. In the first screenshot, the 'Manage user access to published assistant' section is expanded, showing the 'Allow access via Amplify group membership' option. In the second screenshot, the 'Select Amplify Groups' dialog is open, with a red box highlighting the input field where email addresses can be entered. A red arrow points from this input field to the 'Save' button at the bottom right of the dialog, indicating the final step to save the changes.

4. Now, you can visit the URL of the assistant you published and chat with it.
